DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6, 23-27 are rejected under 35 U.S.C. 102(e) as being participated by Wellig et al (U.S Patent No. 6,580,704 B1).

Regarding claims 1, 23, Wellig discloses a method for dynamically selecting a communication channel between an access point (AP) and a plurality of stations (STAs) located within the coverage area of a basic service set, hereinafter BSS, in a wireless local area network (WLAN), figure 10, the method comprising the steps of:

(a) determining whether a new channel setup to be used by said plurality of stations MT1-MTn is needed, figure 6;

(b) issuing slots for MT1, MT2 (requesting), by said AP, for a channel signal quality measure to at least one of said plurality of stations, col.11 lines 10-30;

(c) reporting a channel signal quality report to said AP based on a received signal RSS value based on deep fade changes, col.4 lines 1-5, or power levels, attenuation , col.9 lines 50-60, (strength indication, hereinafter RSSI, and a packet error rate

hereinafter PER) of all channels measured by said plurality of stations, col.11 lines 20-30;

(d) determining a plurality of time slots (candidate channels) for use in communication between said AP and said plurality of stations, col.9 lines 60-63; and

(e) selecting one of said candidate channels for setting up a connection based on said channel quality report for use in communication between said AP and said plurality of stations, figure 6.

Regarding claims 2, 24 Wellig discloses the transmitting the granted slots for communication (selected channel information) to said plurality of stations by said AP, col.11 lines 50-65.

Regarding claims 3, 25 Wellig discloses establishing communication to said selected channel between said AP and said plurality of stations, col.12 lines 50-55.

Regarding claims 4, 26 Wellig discloses that channel signal quality report further includes an interference signal level caused by another communication device, said interference signal level is based on the absence of any 802.11 frame reception, col.1 lines 25-35.

Regarding claims 5, 27 Wellig discloses that RSSI and said PER is used to determine said channel signal quality and a relative distance between the STA requested for said channel signal quality measure and a plurality of adjacent stations from said adjacent BSS, col.4 lines 1-5.

Regarding claim 6, Wellig discloses that it is determined that said new channel is needed in step (a) if one of the following conditions occurs: (1) said BSS is formed by

said AP, col.4 lines 30-40; (2) said AP or said STA experiences a bad channel condition; (3) said BSS overlaps with an adjacent BSS; and, (4) no association of said STA by said AP occurs longer than a predetermined time period, figure 1.
